(54) Insert molding method and mold

(57) This invention concerns a molding method, in which a synthetic resin or rubber is molded upon an insert (work piece) which is set beforehand inside a mold, and a mold to be used in said method, that are excellent in terms of prevention of insert breakage, prevention of burr formation, and manufacture, operation, maintenance, etc. of molds.

A movable supporting member (30) which supports an insert (50) is fitted in a recess (21) on the upper face of the lower mold (20). Beneath its center of gravity, its lower face is supported and pressed towards the upper mold (10) by the tip of a shaft (41) of a pressing mechanism (40). A gap between the side face of the recess (21) and the side face of the movable supporting member (30) allows the member (30) to tilt about the point of support so that the upper face of the insert (50) will be in uniform surface contact with the lower face of the upper mold.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 01 30 4455

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
